NTI Launches New MiST Personal File Sharing Service

NTI today announced the availability of its new MiST personal file [sharing](#) service, which enables users to create a personal file-sharing network to provide anywhere-access of shared content on their computers with other computers and mobile devices.

To celebrate the launch, the first 100,000 people who sign up for the service at <http://www.nticorp.com/products/MiST-Smarter-Way-to-Connect> will receive their first year at no cost.

NTI MiST allows users to keep their data safely on their computers, not in a massive [data center](#) where unknown parties could access it. By having multiple MiST-connected computers, users can [access files](#) on any of those computers directly or through NTI Cloud, allowing them to be constantly connected to any content they want to share. MiST's sync feature also allows for [collaboration](#) on work files and school projects.

MiST software doesn't have to be [installed](#) in order to access MiST-connected computers. With a web browser and an [Internet connection](#), users have access to their MiST-connected computers from any device (Windows, OS X, iOS, Android, Linux, Windows Phone, etc.)

In addition, users can upload photos from any smartphone to a MiST-connected computer to free up space on that device. Also, with NTI MiST's Automatic Camera [Upload](#), users never have to worry about losing a photo they've taken with their mobile device.

MiST is available through the NTI online store (<http://www.nticorp.com/products/MiST-Smarter-Way-to-Connect>) at no charge for the first 100,000 people who sign up (regular price is \$9.99 per computer license annually). NTI MiST apps are now available in Apple's App Store and Google Play.
