NTI Corp Launches New MiST Personal File Sharing Service

MiST Improves Upon Existing Remote File Access and Cloud Services by Providing Industry's Only Comprehensive, Direct Device-to-Device Personal File-Sharing Combined with Cloud Sync Capabilities

IRVINE, Calif., Oct. 15, 2013 /PRNewswire/ -- NTI Corp today announced the availability of its new MiST™ personal file sharing service, which enables users to create a secure, personal file-sharing network to provide anywhere-access of shared content on their computers with other computers and mobile devices. NTI MiST is currently the only comprehensive direct device-to-device content sharing service with cloud sync capabilities on the market.

To celebrate the launch, the first 100,000 people who sign up for the service at http://www.nticorp.com/products/MiST-Smarter-Way-to-Connect will receive their first year at no cost.

NTI MiST Features:

Privacy and Security— In today's digital age where content privacy and security are critical, NTI MiST allows users to keep their data safely on their computers, not in a massive data center where unknown parties could access it.

Constant Content Connection— By having multiple MiST-connected computers, users can easily access files on any of those computers directly or through NTI Cloud, allowing them to be constantly connected to any content they want to share. MiST's sync feature allows for greater collaboration on work files and school projects.

Multi-Platform Compatibility— MiST software doesn't have to be installed in order to access MiST-connected computers. With a web browser and an Internet connection, users have access to their MiST-connected computers from any device (Windows, OS X, iOS, Android, Linux, Windows Phone, etc.)

Extended Storage Capabilities and Media Protection— Mobile devices have limited storage. With MiST, the user's home computer becomes an extension of their mobile device. Users can upload photos from any smartphone to a MiST-connected computer to free up space on that device. Also, with NTI MiST's *Automatic Camera Upload*, users never have to worry about losing a photo they've taken with their mobile device.
"For more than 20 years, NTI Corp has specialized in making complicated things like burning CDs and backing up computers, simple," said Bill Yao, president, NTI Corp. "With our new NTI MiST, we are bringing a smarter, simpler approach to the cloud of confusion currently found in remote access file sharing and storage."

Pricing and Availability MiST is available through the NTI online store (http://www.nticorp.com/products/MiST-Smarter-Way-to-Connect) at no charge for the first 100,000 people who sign up (regular price is $9.99 per computer license annually). NTI MiST apps are now available in Apple's App Store and Google Play.

About NTI Corporation An award-winning software developer for more than 20 years, NTI creates innovative software products that combine ease of use, value, and cutting edge desktop backup and digital media software technologies. NTI developed "CD Maker," one of the first CD-burning software products in the early 1990's and continues as a technology leader today with software products installed on more than 250 million computers worldwide.
